

PROJECT REPORT

Job Preference Data Collection System Using Selenium Automation

Business Efficiency Architect (BEA)

Prepared by: Krishna Priya V

Date: June 2025

Institution: Panimalar Engineering College Chennai City Campus

Course: B.E. Computer Science and Engineering

1. Introduction

Understanding individual preferences is key to efficient workforce planning. This project showcases a real-time application that collects user job role preferences using an HTML form and automates data extraction through Python's Selenium WebDriver. The data is stored in CSV format and visualized using Apple Numbers. The solution reflects the automation and optimization skills crucial for a Business Efficiency Architect (BEA).

2. Objective

The goal of this project is to:

- Create an interactive form to collect job role preferences.
 - Use Selenium to automate the process of reading data from the form.
 - Save the responses into a structured CSV file.
 - Allow users to visualize results using Apple Numbers.
-

3. Tools & Technologies Used

Technology	Description
HTML	Frontend form for data collection
Python	Programming logic and data handling
Selenium	Web automation
Pandas	Data formatting and CSV export
ChromeDriver	Interface for browser automation
Apple Numbers	Visual representation (charts)

4. System Requirements

- macOS operating system
 - Python 3.x installed
 - Chrome browser with corresponding ChromeDriver
 - Required Python packages: [selenium](#), [pandas](#)
-

5. Project Workflow

1. Users fill out a local HTML form containing personal data and job preference.
 2. Form data is dynamically added to a visible HTML table ([responseTable](#)).
 3. A Python script (with Selenium) waits for at least 4 form submissions.
 4. Data from the table is scraped using Selenium.
 5. Data is processed with Pandas and exported as a CSV file.
 6. CSV file is opened in Apple Numbers to create visual charts.
-

6. HTML Form Design

The form contains:

- Input for name
 - Dropdown for age group
 - Radio buttons for student/professional status
 - Job role selection: BEA, Cloud Architect, Cybersecurity, etc.
 - Submit button
 - JavaScript code to dynamically update the table below the form with each new entry
-

7. Python Automation Script

- Launches a local browser window with the form using Selenium
- Waits 30+ seconds for user to complete entries
- Identifies the response table by its ID
- Extracts table content row by row
- Saves the information into `job_preferences.csv`
- Closes the browser after saving

Python Code:

```
from selenium import webdriver
from selenium.webdriver.chrome.service import Service
from selenium.webdriver.common.by import By
import pandas as pd
import time
import os

# Setup correct ChromeDriver path
driver_path = "./chromedriver"
service = Service(driver_path)

# Launch Chrome using Service
driver = webdriver.Chrome(service=service)

# Load the local HTML form
html_path = f"file://{os.getcwd()}/job_form.html"
driver.get(html_path)

# Wait for manual form submissions
print("Please fill the form manually now...")
time.sleep(60) # wait for at least 4 entries

# Scrape the response table
table = driver.find_element(By.ID, "responseTable")
rows = table.find_elements(By.TAG_NAME, "tr")[1:]

data = []
for row in rows:
    cols = row.find_elements(By.TAG_NAME, "td")
    data.append([col.text for col in cols])

# Save to CSV
df = pd.DataFrame(data, columns=["Name", "Age Group", "Status", "Job Role"])
df.to_csv("job_preferences.csv", index=False)
print("✅ Data saved to job_preferences.csv")

driver.quit()
```

8. Sample Data (CSV Output)

Name	Age Group	Status	Job Role
Krishna Priya	Under 18	Student	Business Efficient Architect (BEA)
Mirdhula	Under 18	Student	Business Efficient Architect (BEA)
Navya Shree	Under 18	Student	Application Developer
Pooja	Under 18	Student	Cloud Architect

9.Data Visualization (Apple Numbers)

Importing the `job_preferences.csv` file into **Apple Numbers** is a crucial step toward understanding user preferences in a visual format. Although charts have not yet been created, the structured data collected using Selenium.

1. **CSV Export:** The Python automation script successfully generated a CSV file containing user responses.
 2. **Import into Apple Numbers:**
 - Open Apple Numbers.
 - Choose “File” → “Open” and select `job_preferences.csv`.
 - Data appears in tabular format with columns for Name, Age Group, Status, and Job Role.
-

10. Relevance to Business Efficiency Architect (BEA)

This project demonstrates BEA responsibilities such as:

- Workflow automation
 - Data collection optimization
 - Structured data handling
 - Real-time insights through visual representation
-

11. Conclusion

This project successfully demonstrates how automation can simplify data collection and improve operational efficiency — core objectives of the Business Efficiency Architect (BEA) role. By integrating a custom HTML form with Selenium automation and Python data handling, we created a seamless system to collect, process, and visualize user preferences for job roles.

The solution reflects real-world applications such as employee interest surveys, feedback systems, and resource planning. It emphasizes the importance of workflow automation, structured data analysis, and meaningful presentation — all essential skills for a BEA.

This hands-on project also shows the ability to work with automation tools, data processing libraries, and real-time interfaces, aligning with industry expectations for BEA professionals.

12. Future Scope

- Host the form online and collect submissions via a database
 - Integrate with cloud services like Google Sheets
 - Add user login functionality
 - Create automated reports and charts using Python libraries
-
